

Dwellable iOS

Phase 1 Analysis & Phase 2 Strategy

Generated: April 20, 2026

Executive Summary

Phase 1 validated the core capture thesis: 100% of pilot users successfully captured God moments with voice-first interface. However, zero evidence of return/reflection emerged, revealing a critical gap: Dwellable is currently a **capture tool**, not a **dwelling tool**. Phase 2 must shift from proving capture works to proving users will return to reflect on their moments.

Phase 1 Metrics

Metric	Value
Total Users	10
Total Moments	46
Average Moments/User	4.6
User Adoption Rate	100% (all captured ≥1 moment)
Engagement Range	1-10 moments per user
Active Days Range	1-16 days
Top User (tony@pilot.dwellable.com)	10 moments, 14 days active

What Validated ✓

- **Voice-First Capture Thesis:** 100% adoption. Users immediately understood voice capture with zero learning curve.
- **Technical Stability:** No critical app crashes. Offline-first architecture performed as designed.
- **Security & Privacy:** Users accepted on-device speech-to-text. No privacy concerns raised.
- **Immediate Engagement:** Users captured moments within first session. Initial drop-off pattern (expected for pilot).

What Failed X

- **Return/Reflection:** Zero re-reads observed. Users captured moments but never returned to review them.
- **Engagement Velocity:** Goal of 14 moments/7 days was 3x too aggressive. Actual: 4.6 avg across entire phase (<1/day).
- **Value Clarity:** Users couldn't articulate why revisiting moments matters. App lacked explicit onboarding on reflection value.
- **Dropout Pattern:** Most users inactive after initial capture spike. Indicates 'capture' alone is insufficient value.

Critical Insight from User Feedback

"When working on projects in Notes, I come back to them. For God moments, if they remain incomplete, how could that be denoted? How can we incentivize people to complete their captured moments?"

This reveals the core problem: Phase 1 proved capture works. Phase 2 must prove return works. Without return/reflection, Dwellable is just another notes app.

Phase 2 Strategy: From Capture Tool → Dwelling Tool

Phase 2 is not another feature sprint. It is a fundamental shift in value proposition: Make return effortless and rewarding.

Phase 2 Priorities (Ranked)

1. Reminder/Nudge System (CRITICAL, not in backlog)

Users won't return unless prompted. Implement daily or weekly reflection nudges. Tie to user's actual capture patterns (e.g., nudge 3 days after capture, align with spiritual rhythm).

2. Gallery/Visual Browse (T-055+)

Replace linear list view. Visual grid lets users discover moments without friction. Thumbnail preview shows moment text snippet.

3. Privacy & Value Messaging (Onboarding Refresh)

Current onboarding too long and distracting. Rewrite to emphasize: (1) privacy-first (all processing on-device), (2) why returning matters (steward God's work), (3) question-driven reflection (not ChatGPT interpretation).

4. AI Theme Surfacing (Phase 2b)

Once return is proven, add AI to surface thematic patterns across moments (e.g., 'you wrote about provision 3x'). Highlights meaning without imposing interpretation.

5. Bible Verse Reflection Prompts (Phase 2b)

Optional prompts: 'A verse that resonates with this moment?' Tie moments to scripture for deeper dwelling.

Implementation Plan

Immediate (April 20–May 10): Design and implement reminder system. Test with Phase 1 users to validate return behavior before launching Phase 2 features.

May (Phase 2a MVP): Gallery view + onboarding refresh + reminder nudges. Ship to TestFlight. Measure re-read rate (target: >50% of moments revisited within 7 days).

June (Phase 2b): AI theme surfacing + Bible verse prompts. Prepare Monica endorsement content (testimonial, case study from Phase 1).

Phase 2 Success Metrics

Metric	Phase 1 Baseline	Phase 2 Target
Re-read Rate (% moments revisited)	0%	>50%
Avg Days to 2nd Read	N/A	<7 days
Weekly Active Users	~40% (declining)	>70% (steady)
Avg Moments/User/Week	<1	>2
User Retention (90 days)	Unknown	>60%

Monica Partnership Timeline

Status: Thank-you email sent (April 20). Monica confirmed willingness to endorse and intercede.

Next Step: Post-Phase 2a MVP (May 15–20), pitch Phase 2 results to Monica. Request testimonial/endorsement for early summer soft launch to her audience.

Why This Timing: Phase 2a will demonstrate return/reflection feature works. Proof of concept makes endorsement more credible to Monica's audience.

Conclusion

Phase 1 proved capture works. Phase 2 must prove dwelling works. The shift from 'capture tool' to 'dwelling tool' is not a pivot—it's completing the original vision. A moment only becomes sacred when revisited, reflected upon, and stewarded over time.
